                           The invention relates to a monoclonal antibody (MAb) to lipoteichoic CC acid of gram positive bacteria, where the MAb is a chimeric constant region and at least part of a human immunoglobulin variable constant region and at least part of a non-human immunoglobulin variable constant region and at least part of a non-human immunoglobulin variable constant region and at least part of a non-human immunoglobulin variable constant region and at least part of a non-human immunoglobulin variable constant properties and constant properties and the part of a non-human immunoglobulin variable constant properties and constant properties and the placeton of the variable region of the cantibodies or peptides (encoded by a DNA of the variable region of corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for the diagnosis of gram positive bacteria infections.

CC sequences AAW94705-22 represent sequences resulting from a 15mer library conditied to identify peptide sequences of panning experiments were conducted to identify peptide sequences to which antibody of the converted conducted to identify peptide sequences to which antibody of the panning can be used for the diagnosis of gram positive bacterial infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                      The invention relates to a monoclonal antibody (MAb) to lipoteichoic acid of gram positive bacteria, where the MAb is a chimeric immunoglobulin comprising at least part of a human immunoglobulin constant region and at least part of a non-human immunoglobulin variable cregion having specificity to lipoteichoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance phagocytosis and ckilling of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacterial infections.

Sequences AAW94705-22 represent sequences resulting from a 15mer library conducted to identify peptide sequences of panning experiments were invention (Mab 96-110) bound strongly. The translated sequences provide lipoteichoic acid epitope peptide mimics to which Mab96-110 bound.

                                                                                                                                                                                                                                                                                                        The invention relates to a monoclonal antibody (MAD) to lipoteichoic acid of gram positive bacteria, where the MAD is a chimeric immunoglobulin comprising at least part of a human immunoglobulin constant region and at least part of a non-human immunoglobulin variable region having specificity to lipoteichoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance plagocytosis and ckilling of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody or characterised by amino acids or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacterial infections.

Sequences AAW94705-22 represent sequences resulting from a 15mer library panning second experiment. Three series of panning experiments were conducted to identify peptide sequences to which untibody of the invention (Mab 96-110) bound strongly. The translated sequences provide lipoteichoic acid epitope peptide mimics to which Mab96-110 bound.

                                                                                                                                                                                                                                                                                                                                                                                                                                    ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the print specification, but was obtained in electronic format directly from WI specification, but was obtained in electronic format directly from WI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Propionibacterium acnes vaccinating against and treating acne vulgaris .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Skeiky YAW, Persing DH, L'maisonneuve J, Zhang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention

ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic lupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders infectious diseases, autoimmune disorders such as multiple sclerosis, rheumatoid arthritis, autoimmune inflammatory eye disease. ORFX proteins are also disease and autoimmune inflammatory eye disease. ORFX proteins are also
SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay;

                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    pustulosis, hypertosis and osteomyelitis), uveits and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunoscrbant accase presence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21-APR-2000;

                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence is encoded by an extended human secreted protein coding sequence of the invention. The secreted proteins can be used in treating or controlling a variety of human conditions. The secreted proteins may act as cytokines or may affect cellular proliferation or differentiation or may act as immune system regulators, haematopoiesis regulators, tissue growth regulators, regulators of reproductive hormones or cell movement or have chemotactic/chemokinetic, receptor/ligand, anti-inflammatory or tumour inhibition activity. The DNAs can be used in forensic procedures to identify individuals or in diagnostic procedures to identify individuals or in diagnostic procedures to identify individuals or the activity assess resulting from abnormal expression of the genes corresponding to the extended cDNAs. They are also useful for constructing a high resolution map of the human chromosomes. They can also be used for gene therapy to control or treat.genetic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               10-AUG-1998;

The secreted proteins can be used in treating or controlling a variety of human conditions. The secreted proteins may act as cytokines or may affect cellular proliferation or differentiation or may act as immune system regulators, haematopoiesis regulators, tissue growth regulators, regulators of reproductive hormones or cell movement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   or have chemotactic/chemokinetic, receptor/ligand, unti-inflammatory or tumour inhibition activity. The DNAs can be used in forensic procedures to identify individuals or in flagnostic procedures to identify individuals or independent of procedures to identify individuals or independent of the genes corresponding to the extended cDNAs. They are also useful for constructing a high resolution map of the human chromosomes. They can

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antiparkinsonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, osteoporosis, severe combined immunodeficiency, eczema, allergic

                                                                                                                                                                                                                                                                                                                                                        This sequence is encoded by an extended human secreted protein coding sequence of the invention. The secreted proteins can be used in treating or controlling a variety of human conditions. The secreted proteins may act as cytokines or may affect cellular proliferation or differentiation or may act as immune system regulators, haematopoies is regulators, tissue growth regulators, regulators of reproductive hormones or cell movement or have chemotactic/chemokinetic, receptor/ligand, anti-inflammatory or tumour inhibition activity. The DNAs can be used in forensic procedures to identify individuals or in diagnostic procedures to identify individuals or in diagnostic procedures to identify individuals or in diagnostic procedures to identify the genes corresponding to the extended cDNAs. They are also useful for constructing a high resolution map of the human chromosomes. They can also be used for gene therapy to control or treat genetic diseases.
                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim

; Sequence 45, Application US/08887534A
; Patent No. 6455323
; GENERAL INFORMATION:
APPLICANT: Holden, David W.
TITLE OF INVENTION: ANTI-BACTERIAL METHODS AND MATURIALS
NUMBER OF SEQUENCES: 106
CORRESPONDENCE ADDRESS:
ADDRESSE: Marshall, O'Toole, Gerstein, Murray & Borun
STREET: 233 South Wacker Drive/6300 Sears Tower
CITY: Chicago
STATE: Illinois
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 3170, Application US/09134001C
PATENT NO. 6380370
GENERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO AC
TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOST
FILE REFERENCE: GTC-007
CURRENT APPLICATION NUMBER: US/09/134,001C
CURRENT FILING DATE: 1998-08-13
PRIOR APPLICATION NUMBER: US 60/064,964
PRIOR FILING DATE: 1997-11-08
PRIOR FILING DATE: 1997-08-14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ; TYPE: PRT; ORGANISM: Staphylococcus epidermidis US-09-134-001C-3170
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NUMBER OF SEQ ID NOS: 5674

ALIGNMENTS

AAW12276 standard; peptide; 15 AA.

AAW12276;

15-APR-1997 (first entry)

Synthetic library peptide #1 which binds anti-T. gondii P30 antibody

Toxoplasma gondii; surface protein; antibody; screening; peptide library; diagnostic assay; immunisation; phage; fusion protein; envelop.

Synthetic.

31-JUL-1996 EP724016-A1.

29-JAN-1996; 96EP-0420030

30-JAN-1995; 95FR-0001297

The peptide sequences AAW12276-86 were identified. Of the 30 colonies studied, this peptide sequence was encoded 11 times. A template peptide sequence (AAW12287) corresponding to the sequence across the phage PIII sequence and putative pentadecapeptide was used to generate a series of overlapping pentadecapeptides. These peptides were used to determine the best peptide sequence which binds the IELE7 antibody. Peptides AAW03367-75 were isolated. The new peptides can then be used in diagnostic assays to detect T. gondii antibodies in a sample or to purify anti-p30 antibodies or for active immunisation against T. gondii.
                                            AAW71332-36 represent glycolipid sugar chain replica peptides. They react specifically with an antibody against glycolipid sugar chains and inhibit adhesion and metastasis of cancer cells to a target cell
                                                                                                                                                           New peptide which reacts specifically with antibody against glyco-lipid sugar chains - useful for inhibition of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 was generated to express pentadecapeptides on the surface of a filamentous phage as a fusion protein with the PIII protein. The library was screened with immobilised anti-T. gondii P30 protein antibody lE1E7. Phages which bind this antibody were recovered and amplified by one round of infection in E. coli. The resultant phages were rescreened with the immobilised antibody and the second round screen isolated 58 bacterial colonies infected with phage. Of the 58 colonies, phage DNA first page and the second round screen isolated by the second round screen isolated.
                                                                                                            Claim 8; Page 3;
                                                                                                                                                                                                                                                                                                                                             08-SEP-1998.
                                                                                                                                                                                                                                                                                                                                                                              JP10237099-A

                                                                                                                                  acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacterial infections. The present sequence represents a specifically claimed lipscteichoic acid epitope peptide mimic that can be bound by the antibody of the invention (Mab 96-110).
                                                                                                                                                                                                                                                                                                                                   specificity to lipoteichoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance phagocytosis and killing of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a monoclonal antibody (MAb) to lipoteichoic acid of gram positive bacteria, where the MAb is a chimeric immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Monoclonal antibody; MAb; lipoteichoic acid; gram immunoglobulin; phagocytosis; infection; epitope; Mab 96-110.

                                                                                                                                                                                                                                                           밁
                                                                                                                       õ
                                                                                                                                                                                                                                                                                            The present invention describes composition of matter (I) comprising an . CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is: CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2. (L4)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L2)d-P2-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L4)f-P4-(L2)d-P2-(L4)f-P4-(L4)f-P4-(L2)d-P2-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)f-P4-(L4)

neuroprotective activities. (1) can be used as a therapeutic or prophylactic agent as well as for screening purposes. (1) is useful for diagnosing diseases characterised by dysfunction of their associated protein of interest, for identifying normal or abnormal proteins of interest, for identifying normal or abnormal proteins of interest in a biological sample. Additionally, (1) is useful for treating inflammatory and autoimmune diseases, tumour growth, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders, infertility, and neurological degenerative diseases, tumour growth, cancer, compounds are useful for treating disorders characterised by low red blood cell levels such as anaemia. The TPO-mimetic comprising companies are useful for treating disorders characterised by megakaryocyte/platelet deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic tumour which result in thrombocytopaenia, aplastic anaemia erythematosus, and Fanconi's syndrome. ABB73403 to ABB73426 and ABL35695 to ABL35777 represent amino acid and nucleic acid sequences used in the

                                                                                                                                                                                                               밁
                                                                                                    Š
                                                                       멍
                                                                                                                                                                                                                                           The invention relates to a monoclonal antibody (MAb) to lipoteichoic CC acid of gram positive bacteria, where the MAb is a chimeric immunoglobulin comprising at least part of a human immunoglobulin cCC immunoglobulin comprising at least part of a non-human immunoglobulin variable constant region and at least part of a non-human immunoglobulin variable region having specificity to lipoteichoic acid of gram positive bacteria. CC The antibodies bind to whole bacteria and enhance phagocytosis and ckilling of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of CC antibodies or peptides (encoded by a DNA of the variable region of CC anti-lipoteichoic acid antibody or characterised by amino acids CC corresponding to one or more of the complementarity determining regions CC (CDRs) of the variable region of the antibody) can be used for treating CC or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacterial infections.

CC Sequences AAW94726-34 represent common peptide sequences resulting from CC all library panning experiments. Three series of panning experiments were CC conducted to identify peptide sequences to which antibody of the invention (Mab 96-110) bound strongly. The translated sequences provide CC lipoteichoic acid epitope peptide mimics to which Mab96-110 bound.
                                                                                                                                                         Query Match

                                                                                                                                                                 ₽
                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                             The invention relates to a monoclonal antibody (MAb) to lipoteichoic CC acid of gram positive bacteria, where the MAb is a chimeric constant region and at least part of a human immunoglobulin comprising at least part of a human immunoglobulin variable constant region and at least part of a non-human immunoglobulin variable cregion having specificity to lipoteichoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance protection from lethal infection. The catiling of the bacteria and enhance protection from lethal infection. The catility of the concept of the constant protection from lethal infection. The cantibodies or peptides (encoded by a DAA of the variable region of CC anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CC (CDRs) of the variable region of the antibody) can be used for treating CC or preventing infections caused by gram positive bacterial infections. CC sequences AAM94705-22 represent sequences resulting from a 15mer library CC panning second experiment. Three series of panning experiments were conducted to identify peptide sequences to which antibody of the conducted to identify peptide sequences to which antibody of the point of the provide contention (Mab 96-110) bound strongly. The translated sequences provide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    뫄
                                                                                                                                                                                                                                                                                                                                                                                   Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a monoclonal antibody (MAb) to lipoteichoic cc acid of gram positive bacteria, where the MAb is a chimeric cc immunoglobulin comprising at least part of a human immunoglobulin variable constant region and at least part of a non-human immunoglobulin variable region having specificity to lipoteichoic acid of gram positive bacteria. Cc The antibodies bind to whole bacteria and enhance phagocytosis and cc killing of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of cc anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody can be used for treating cc or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacteria infections.

CC Sequences AAN94705-22 represent sequences resulting from a 15mer library conducted to identify peptide sequences of panning experiments were conducted to identify peptide sequences to which antibody of the invention (Mab 96-110) bound strongly. The translated sequences provide conducted to identify peptide mimics to which Mab96-110 bound.
                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a monoclonal antibody (MAB) to lipoteichoic CC acid of gram positive bacteria, where the MAB is a chimeric immunoglobulin comprising at least part of a human immunoglobulin variable constant region and at least part of a non-human immunoglobulin variable region having specificity to lipoteichoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance phagocycosis and calling of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by aDNA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody or the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacteria infections. Sequences AAW94705-22 represent sequences resulting from a 15mer library panning second experiment. Three series of panning experiments were conducted to identify peptide sequences to which antibody of the invention (Mab 96-110) bound strongly. The translated sequences provide lipoteichoic acid epitope peptide mimics to which Mab96-110 bound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW94708
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC The invention relates to novel peptides which bind to antibodies which C recognise the Toxoplasma gondii P30 envelop protein. A peptide library CC was generated to express pentadecapeptides on the surface of a CC filamentous phage as a fusion protein with the PIII protein. The library CC was screened with immobilised anti-T. gondii P30 protein antibody lE1E7. CC Phages which bind this antibody were recovered and amplified by one CC round of infection in E. coli The resultant phages were rescreened with CC the immobilised antibody and the second round screen isolated 58 bacterial colonies infected with phage. Of the 58 colonies, phage DNA CC form 30 colonies infected with phage. Of the 58 colonies, phage DNA CC the pentadecapeptide encoded. The peptide sequences ANM12276-86 were CC identified. Of the 30 colonies studied, this peptide sequence was CC encoded once. A template peptide sequence (ANM1227) corresponding to CC the sequence across the phage PIII sequence and putative peptides were used to determine the best CC pentadecapeptide was used to generate a series of overlapping CC pentadecapeptides. These peptides were used to determine the best CC peptide sequence which binds the IEET antibody. Peptides ANW3357-75 CC were isolated. The new peptides can then be used in diagnostic assays to CC detect T. gondii antibodies in a sample or to purify anti-P30 antibodies or for active immunisation against T. gondii.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a monoclonal antibody (MAb) to lipoteichoic CC acid of gram positive bacteria, where the MAb is a chimeric immunoglobulin comprising at least part of a human immunoglobulin constant region and at least part of a non-human immunoglobulin variable cregion having specificity to lipoteichoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance phagocytosis and killing of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacteria infections. Sequences AAN94705-22 represent sequences resulting from a 15mer library conducted to identify peptide sequences of panning experiments were conducted to identify peptide sequences to which antibody of the invention (Mab 96-110) bound strongly. The translated sequences provide lipoteichoic acid epitope peptide mimics to which Mab96-110 bound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

Peptides AAW03367-75 are peptides isolated from a peptide library, whi bind to antibody IEIE7 which recognises the P30 surface protein from Toxoplasma gondii. The peptide library was constructed by inserting a nucleic acid sequence encoding a random pentadecapeptide in the PIII envelop protein of a filamentous phage. Antibody IEIE7 was immobilise

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC recognise the Toxoplasma gondii P30 envelop protein. A peptide library CC was generated to express pentadecapeptides on the surface of a CC filamentous phage as a fusion protein with the PIII protein. The library CC was screened with immobilised anti-T. gondii p30 protein antibody lEIE7. CC Phages which bind this antibody were recovered and amplified by one CC round of infection in E. coli. The resultant phages were rescreened with the immobilised antibody and the second round screen isolated 58 CC bacterial colonies infected with phage. Of the 58 colonies, phage DNA CC from 30 colonies was isolated and sequenced to determine the sequence of the pentadecapeptide encoded. The peptide sequences AAM12276-86 were CC identified. Of the 30 colonies studied, this peptide sequence was CC the sequence across the phage PIII sequence (AM12287) corresponding to CC the sequence across the phage PIII sequence and putative CC pentadecapeptide was used to generate a series of overlapping CC pentadecapeptides. These peptides were used to determine the best CC peptide sequence which binds the IEIE7 antibody. Peptides AAW3367-75 CC were isolated. The new peptides can then be used, in diagnostic assays to CC detect T. gondii antibodies in a sample or to purily anti-P30 antibodies or for active immunisation against T. gondii.

Peptides AAW03367-75 are peptides isolated from a peptide library, which bind to antibody 1E1E7 which recognises the 930 surface protein from Toxoplasma gondii. The peptide library was constructed by inserting a nucleic acid sequence encoding a random pentadecapeptide in the PIII envelop protein of a filamentous phage. Antibody 1E1E7 was immobilised on the bottom of a Petri dish and the expressed peptide library was overlaid on the antibody. After washing, phages bound on the antibodies were recovered and the phage amplified by passage through E. coli. The phages were rescreened by the same method and 58 bacterial colonies were recovered. Of these, 30 were further studied and the nucleic acids encoded the peptides AAW12276-86. A series of overlapping peptides based on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  on the bottom of a Petri dish and the expressed peptide library was overlaid on the antibody. After washing, phages bound on the antibodies were recovered and the phage amplified by passage through E. coli. The phages were rescreened by the same method and 58 bacterial colonies were recovered. Of these, 30 were further studied and the nucleic acid encoding the pentadecapeptide was isolated. The nucleic acids encoded the peptides AAW12276-86. A series of overlapping peptides based on the peptide template AAW12287 was constructed to identify which peptide sequences bound to the anti-p30 antibody. The peptides canning isolated peptides can two beautiful and to the anti-p30 antibody. The peptides can then be used in diagnostic assays to detect T. gondii antibodies in a sample or to purify anti-p30 antibodies or for active immunisation against T. gondii.

                                                   peptide template AAW12287 was constructed to identify which peptide sequences bound to the anti-P30 antibody. The peptide scanning isolated peptides AAW03367-75. The peptides can then be used in diagnostic assays to detect T. gondii antibodies in a sample or to purify anti-P30 antibodies or for active immunisation against T. gondii.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                          Score
